2. Project Requirements Analysing :

3. Breaking Down the project into smaller part :

4. Creating our apps : startapp

accounts, cart, category, store, orders

5. Using templates in our apps :

static → css, fonts, images, js

templates → index.html

accounts → signin.html, register.html

cart → cart.html

category →

store → store.html, product-detail.html

orders → order_complete.html

6. Working with Static Files :

static files add in settings, load static and source from static

7. Extending base html : for all app

8. Naming our urls : Linking with navbar

9. Creating Category Model : CategoryModel → Products

slug → customizing url and avoiding spaces, prepopulated_fields

10. Creating Product Model : OneToMany Relation with Category Model

11. Handling Media Files :

Media file → Changeable / from Backend,

Static file → fixed / from frontend

12. Summary :
