1. **Bonus_Module_Video_1 : Drawing ERD**

   How to draw Entity Relation Diagram Properly. There are many websites/way to generate, we can use

   draw.io : *https://app.diagrams.net/*

2. **Bonus_Module_Video_2 : ERD into DDL**

   For creating a database / table in proper and guided rules, we need to convert **ERD into DDL (SQL) language first**. Then,
   Developers will insert / update the database by using programming languages like : python, javascript, c++ etc any language he/she want.

   Relation table attribute's primary key will be a **composite primary key or, both foreign keys,** which are using these **related / connected table's primary key's** reference.
